

The font that will be used for the website is Arail because it's pretty standard and hasn't changed that much to other fancier types of fonts. The reason why I have chosen this font to be used this font because is that it's an easier to understand font, so it will help people with dyslexia.

The colour scheme that will be used for the website will be black (#000000) and orange (#ef4c10). The reason i have chosen this colour scheme is because the colours don't clash with one another. So it will give a good colour scheme to the website. and will be easier to read

The distance between the pictures will be of equal distance to give the website a more organised look instead of it being all being uneven distances and it also makes the website easier to understand.

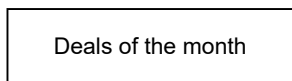

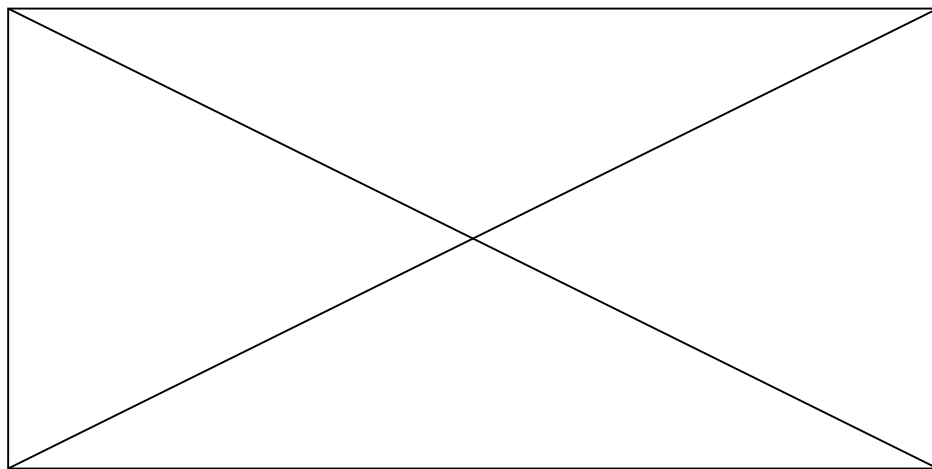

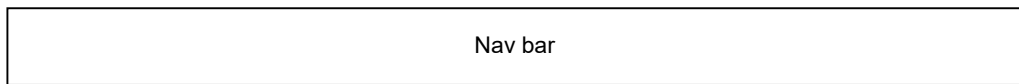

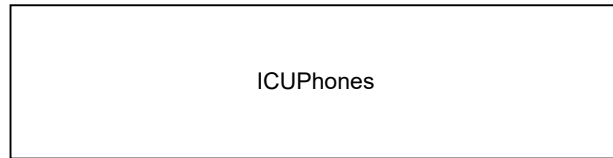

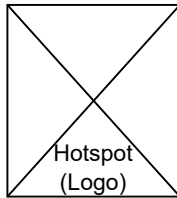

Interative features i will use for the website are links to take you to different pages and a search/nav bar, the logo will be on all pages to be able to take you back to the home page.

You will be able to access the website on both pc and a mobile device both the mobile and pc layout will have different designs to each other.

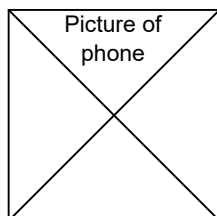

The design I will be using for the website will be design 1 I have chosen this design because I like idea of the home page more on design 1 also I like the idea of having headings of what page your on and not having a search bar on design 1.
